

Ayush Pahuja

Full Stack AI/ML Engineer

ayush.pahuja090@gmail.com — +91 8503022066

[Portfolio](#) — [GitHub](#) — [LinkedIn](#)

PROFESSIONAL SUMMARY

- Full Stack Engineer with 2+ years of experience specializing in AI/ML products, Agentic workflows, and scalable DevOps architecture.
- Expertise in building production-ready systems using React, TypeScript, and Supabase, with a strong focus on LLM orchestration, Machine Learning, and Computer Vision.
- Proven ability to own features end-to-end, from training YOLOv8 models to deploying automated CI/CD pipelines on AWS and Vercel.

EXPERIENCE

Vegavid Technologies

New Delhi, India

Full Stack & AI Engineer

Jun 2024 – Sep 2025

- Engineered AI-driven applications by integrating Claude and Gemini APIs, implementing LangGraph for complex multi-agent orchestration and production-oriented workflows.
- Trained and fine-tuned YOLOv8 Machine Learning (ML) models for custom object detection tasks, utilizing OpenCV for advanced image processing and data visualization.
- Architected a secure Iberia Gold Token Sale Platform enabling ERC20 purchases via Stripe and USDT (Polygon), managing high-value transactional integrity with PostgreSQL.
- Developed an automated autosweep service using Node.js crons to aggregate treasury funds, reducing manual overhead and enhancing security protocols.
- Optimized full-stack delivery by migrating legacy components to Supabase (Edge Functions, Auth) and Tailwind CSS, improving development velocity and frontend responsiveness.
- Containerized AI/ML services using Docker and established GitHub Actions pipelines for zero-downtime deployments on Vercel and AWS EC2.

OneRare

Remote

Full Stack Developer (Contract)

Jan 2023 – Jun 2024

- Developed blockchain-enabled web applications using React.js, Web3.js, and smart contracts on Ethereum and Polygon.
- Managed backend APIs on AWS EC2 with CloudWatch monitoring, ensuring platform stability during high-traffic NFT sales events.
- Automated containerized workflows using Docker Compose and GitHub Actions for rapid staging-to-production cycles.

KEY PROJECTS

TruthLens — [View Project](#)

- Built a media verification tool designed to detect deepfakes and identify media sources using advanced AI/ML classification algorithms.

TECHNICAL SKILLS

- **AI & Machine Learning:** Palantir, LangChain, LangGraph, CrewAI, YOLOv8, OpenCV, Claude API, Gemini API, Prompt Engineering, Deepfake Detection
- **Backend & Architecture:** Node.js, Supabase (PostgreSQL), Edge Functions, Express, Redis, REST APIs, WebSockets, API Development, Microservices, Software Design
- **DevOps & Automation:** AWS (EC2, S3, RDS), Vercel, Docker, GitHub Actions, Continuous Integration (CI/CD), Version Control (Git), NGINX, Automation
- **Software Engineering & QA:** Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA), Software Development, Software Testing, Unit Testing, QA Validation, Clean Code, Code Review, Debugging, Documentation, Performance Optimization, Security
- **Frontend & Integrations:** React.js, Next.js, TypeScript, Tailwind CSS, Shadcn/UI, WhatsApp API, Razorpay, Stripe, Web3.js, Ethers.js
- **Languages:** JavaScript (ES6+), TypeScript, Python, C, C++, Java, Bash, SQL

- **Core Competencies:** Problem Solving, Logical Thinking, Communication Skills, Collaborative Mindset, Quick Learner

EDUCATION

NSUT East Campus (Previously AIACTR)

B.Tech in Electronics and Communication Engineering (ECE)

2019 – 2023

ACHIEVEMENTS

- Successfully deployed and maintained production-grade AI/ML tools and blockchain platforms with zero security breaches.
- Reduced deployment cycles from 2 hours to 15 minutes by implementing automated CI/CD and Dockerized environments.
- Architected scalable systems supporting 50K+ users with high-availability monitoring via Prometheus and Grafana.
